2. CITATIONS AND EXPLANATIONS

The invention relates to compounds and methods of using such compounds to treat diseases with aminothiophene inhibitors of IKK-beta phosphorylation of I κ B. Considering the prior art cited (US 4,782,080 and US 6,018,056) in the International search report, claims 1-17 of this invention is novel. The closest prior art of record is Witzel et al (US 4,782,080). Claims 1-17 meet the criteria set out in PCT rticle 33(2)-(4), because the prior art do not teach or fairly suggest a method of inhibiting pathological activation of the transcription factor NF-kB using amino benzothiophene compounds as described in this application.
